The “National Policy on PPP” recently approved by the Government of Ghana (GoG) sets out the government’s intention to use Public-Private Partnerships (PPPs) to “improve the quality, cost-effectiveness, and timely provision of public infrastructure in Ghana.” The PPP Policy highlights the role of the government’s financial support to PPPs, as well as the importance of putting in place a system to manage the associated fiscal commitments (FCs). This study proposes an operational framework for managing fiscal obligations arising from PPPs in Ghana. This framework aims to ensure that PPP FCs are consistently identified and assessed during PPP project preparation, and that these assessments are fed into project approval. The framework will also ensure that PPP FCs are monitored, reported on, and budgeted for appropriately over the lifetime of PPP projects. To that end, the report outlines roles and responsibilities, concepts, and processes for managing PPP FCs, drawing on international standards and practices, bearing in mind existing institutions and capacities in Ghana. The report also suggests legislative additions and capacity-building needed to establish this framework in practice.

Climate Change Operational Framework

2017-2030 - Asian Development Bank 2017-08-01
The Climate Change Operational Framework 2017-2030 is intended to provide broad direction and guidance for enhancing resilience and strengthening climate actions in the operations and business processes of the Asian Development Bank (ADB). It positions ADB to facilitate, collaboratively and proactively, a regional shift toward a low greenhouse gas emissions and climate-resilient development path. The operational framework provides guidance across all ADB sector and thematic groups to support climate adaptation and mitigation actions, operationalizing ADB's commitment to provide at least $6 billion per year in climate change financing from its own resources by 2020. It outlines actions and the institutional measures to be implemented to enable ADB to meet the climate needs of its developing members.

Operational Framework for Building Climate Resilient Health Systems - World Health Organization

This document presents the World Health Organization (WHO) Operational framework for building climate resilient health systems. The framework responds to the demand from Member States and partners for guidance on how the health sector and its operational basis and health systems can systematically and effectively address the challenges increasingly presented by climate variability and change. This framework has been designed in light of the increasing evidence of climate change and its associated health risks; global, regional and national policy mandates to protect population health; and a rapidly emerging body of practical experience in building health resilience to climate change.

Primarily intended for public health professionals and health managers, this framework would also help guide decision-makers in other health-determining sectors, such as nutrition, water and sanitation, and emergency management.

International development agencies could use this framework to focus investments and country support for public health, health system strengthening and climate change adaptation. The objective of this framework is to provide guidance for health systems and public health programming to increase their capacity for protecting health in an unstable and changing climate. By implementing the 10 key components laid out in this framework, health organizations, authorities and programs will be better able to anticipate, prevent, prepare for and manage climate-related health risks. Least developed countries and countries in the process of developing the health components of National Adaptation Plans (NAPs) under the UN Framework Convention on Climate Change (UNFCCC) (4) may find this document particularly useful in their efforts to design a comprehensive response to the risks presented by short-term climate variability and long-term climate change.

**Integrated Management from E-Business Perspective** - Pradeep Kumar Ray 2012-12-06 E-Business covers a broad spectrum of businesses based on the Internet, including e-commerce, e-healthcare, e-government and e-tailing. While substantial attention is being given to the planning and development of e-business applications, the efficiency and effectiveness of e-business systems will largely depend on management solutions. These management solutions demand a good grasp of both the technical and business perspectives of an e-business service. There have been many books on the Internet based on e-commerce, Internet protocols, distributed components etc. However, none of these books address the problem of managing e business as a set of networked services. They do not link enterprise management with network and systems management. This book provides an overview of the emerging techniques for IT service management from a business perspective with case studies from telecommunication and healthcare sectors. It integrates the business perspective with relevant technical standards, such as SNMP, WBEM and DMI. This book presents some concepts and methodologies that enable the development of effective and efficient management systems for networked services. The book is intended to familiarize practicing managers, engineers, and graduate level students with networked service management concepts, architectures and methodologies with reference to evolving standards. It should be useful in a number of disciplines, such as business management, information systems,
computers and networking, and telecommunications. Appendix 2 is based on TeleManagement (TM) Forum's documents on TOM (GB921, GB910 and GB908). While this appendix has explained the basic management concept of an e-telco, TMForum now recommends the use of eTOM as explained in www.tmforum.com. An overview of eTOM is available in the report The TeleManagement Forum's enhanced Telecom Operations Map (eTOM) by Michael Kelly appearing in the Journal of Network and Systems Management in March 2003.

The Integration of Strategic and Operational Management Systems Into a Goal-driven
Communicable Framework for Organizational Change - Mitchell Bostelman
1998
The complexity faced by today's organizations requires a comprehensive, rigorous approach to strategic planning, tracking, and assessment of goals. Though there are approaches to supporting various high-level activities associated with goals, there are no frameworks that begin with strategy and end with a mechanism for communicating goal-driven operational objectives. The missing pieces to this puzzle are the linkages between the strategy formulation, and the implementation and communication of an operational management system. These linkages between the strategic and operational systems are needed in order to provide the organization an opportunity to attain and maintain its desired competitive position. The linkages between systems are manifested in the organization's goal-setting and metric communication framework. It is proposed in this research that an operational framework is needed that embodies the organization's goals and strategies. This framework will incorporate the Goal Question Metric Approach and the Balanced Scorecard Approach as these methods are becoming widely used in industry to support high-level strategic planning and assessment. In this thesis, an executable methodology is developed that integrates industry analysis, strategy formulation for multiple organizational perspectives, goal-setting, and metric development and communication techniques. A case study is conducted in order to evaluate the effectiveness of the proposed framework.

Remote School Attendance Strategy (RSAS) - 2019
The RSAS Operational Framework establishes the minimum requirements for the establishment, operation and management of the Remote School Attendance Strategy (RSAS). It provides a practical resource to support RSAS Providers to deliver RSAS in remote locations.
communities. RSAS Providers, funded by the Department of the Prime Minister and Cabinet (the Department), should use this Operational Framework to ensure they deliver all requirements of RSAS. The Department will also use this Framework to help manage RSAS contracts and provide guidance to RSAS Providers. This Operational Framework forms part of the RSAS Project Agreement along with the Head Agreement for Indigenous Grants and the relevant Project Schedule. This Operational Framework is not a stand-alone document and does not contain all the contractual requirements for RSAS Providers. It must be read in conjunction with the Head Agreement for Indigenous Grants and the relevant Project Schedule. All RSAS Project Schedules include reference to this Operational Framework and require RSAS Providers to comply with the mandatory requirements in this Operational Framework. [Publisher summary, ed]

Made to Serve- Timothy Baines 2013-04-09 A comprehensive, practical introduction to one of the most important new trends in manufacturing, globally The delivery of a service component as an added value when providing products, servitization is all the rage in the manufacturing
sector around the world. Yet, despite the clear competitive advantage of servitization, most manufacturers remain reluctant to venture into, what for them, is a strange new world. Written by a team of internationally respected servitization experts and innovators, this book provides you with a detailed road map for successfully navigating the servitization terrain. Unlike most authors on the subject who merely sing the praises of servitization, Baines and Lightfoot provide you with a framework for accessing the feasibility of adopting a services-led competitive strategy in your company, along with strategies for designing and implementing the kinds of service offerings customers increasingly are coming to expect. Grounded in real-world practice and supported by a wealth of up-to-the minute research, this book helps ease the way for manufacturers considering adopting a servitization model. Shows how to exploit your company's manufacturing competencies to build a strong servitization element without becoming "just another services company". Provides numerous illustrations and examples of services-led competitive strategies, with an emphasis on the advanced services most widely associated with servitization worldwide. Packed with fascinating and instructive case studies from leading manufacturing firms across industry sectors, including Caterpillar, Rolls-Royce, Alstom, MAN, Xerox and others.

**Learning from Project Management Implementation by Applying a Management Innovation Lens** - Janice Thomas 2012

Management innovation is a complex and dynamic process of organizational change that is not well understood. Drawing from the innovation and organizational change literatures, and using project management as an example of one particular form of management innovation, the authors operationalize this project management innovation process by identifying types of innovation events defined by the pace and scope of the change implemented. An operational framework of management innovation, based on its pace (cumulative or episodic), and scope (convergent or radical), was used for the purpose of this study. The paper reports on empirical research examining 48 cases of project management implementation, the aim of which is to explore characteristics of the change in project management process and possible ways of dealing with associated complexities. Linking innovation events into a journey, the authors map complex innovation journeys and provide empirically based insight into how value is created and destroyed through the selection and dynamics of innovation events that either support or detract from historical project management trajectories. The paper concludes by providing practical insights for those who contemplate undertaking such a journey.

**Egypt** - Weltbank 2012

The Framework presented in this report links - for the first time in the Egyptian context - access to investment in rural sanitation services to quantifiable water quality (and health) improvements, in a given hydrologic basin. The Framework provides an integrated, institutional structure of relevant Government agencies and of serviced communities, which is built on integrated water resources management (IWRM) principles: treating water as a holistic resource, management at the lowest appropriate level, and inclusive stakeholder participation. The Framework's specific objectives include:

1. 100% coverage of all houses within each project
village with access to improved sanitation services; effective facilities for wastewater disposal; discontinued practice of discharging untreated domestic wastewaters into irrigation drains, canals, or storm drains; and, cost-effective measures for solid waste management. This Framework uses the hydrologic basin as the basic geographical unit to manage the quality of water in irrigation drains and canals, while envisaging a Strategic Management Unit at the national level, accountable to a Framework Advisory Board. The Management Unit will define water quality and other national goals for each hydrologic basin, in Branch Canal Water Board command areas, and within villages. Continued performance monitoring, and benchmarking at village and Branch Canal Water Board levels, is a key element in creating both the incentives, and public disclosure mechanisms for achieving, monitoring, and sustaining water quality and health goals. Government, donors, and beneficiaries will be the principal sources of financing. In view of other ongoing efforts in the water sector, the Bank could provide added value to the piloting, and the subsequent implementation of the Framework. This would be done by leveraging funds, and integrated capacity across the water resources, and water supply and sanitation sectors.

**Monetary Policy Implementation: Operational Issues for Countries with Evolving Monetary Policy Frameworks**

Nils Mæhle 2020-02-07 This paper discusses operational issues for countries that want to reform their monetary policy frameworks. It argues that stabilizing short-term interest rates on a day-to-day basis has significant advantages,
and thus that short-term interest rates, not reserve money, in most cases should be the daily operating target, including for countries relying on a money targeting policy strategy. The paper discusses how a policy formulation framework based on monetary aggregates can be combined with an operational framework that ensures more stable and predictable short-term rates to enhance policy transmission. It also discusses how to best configure an interest-rate-based operational framework when markets are underdeveloped and liquidity management capacity is weak.

**Project Management at the Edge of Chaos**
Alfred Oswald 2018-03-21 Complexity is a gift that can be made available for the successful implementation of projects, and used to create a new order or to change an existing one. Based on scientific facts, the authors present a systematic approach, which integrates complexity and its multitude of facets and gives practical recommendations for dealing with complexity in projects. The methods paradigm in project management is currently undergoing a massive upheaval. Projects are complex entities that cannot be tackled using traditional methods, such as classical cause and effect approaches. Complexity, and the associated phenomenon of self-organization, is a natural, but hidden designer. It offers a great opportunity in its use as a key driver for the implementation of projects. This requires identification of the principles of complexity and then using these for project management. In this book, the latest findings from natural sciences and brain research are used and transferred within a practice-oriented framework. The authors describe the methods of complexity regulation in projects and how self-organization for the management of projects can be applied.
